

This Ai-power App is created by Per Lindstedt and is trained on the Value Model.

Product Specification Coach

Do you struggle to get your product development project off the ground and on track due to disorganized or unclear requirements?

No AI can write a perfect Product Specification. But our Product Specification Coach can give you a quick, confident start—a revolutionary AI-powered app designed to help you begin your product development journey.

How it Works

The Product Specifications Coach will analyze your text and populate the essential information domains that form the backbone of a comprehensive Product Specification:

- Customers: Define and describe your target audience
- Needs: Formulate Customer Needs the right way
- Functions: Transform your functionality, features, and performance into a Value chart

- Solutions: Create a simplified System architecture with subsystems and specifications
- Processes: List important considerations essential for the Customer Journey

Product Specifications Coach generates a structured document and framework in .docx format, making it easy to continue working on and refine your Product Specification. Alternatively, receive a professional PDF report that's ready to share with stakeholders.

Benefits

- Save time and effort
- Get your information structured correctly
- Establish a solid foundation for your product development project
- Gain a head start on success.

Product Specification Coach

To initiate the process, upload a PDF or DOCX file with a maximum character limit of 10000 characters. The application will extract and interpret the text, populating the relevant domains with raw information. You will then review and refine this information, verifying its accuracy and making any necessary changes. Throughout this process, the application uses AI to streamline the refinement and ensure the quality of the resulting information.

1. Set granularity

90%

Minimum AI confidence for cards shown on each domain screen. The lower the number, the more information will be extracted from the document.

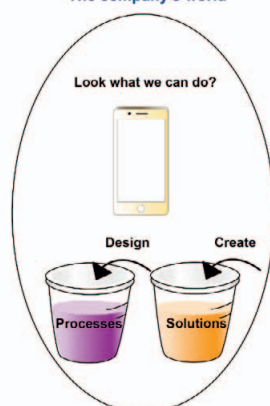

2. Upload a document

Choose file (.pdf / .docx)

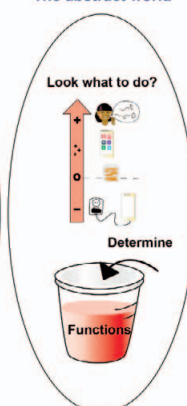

Analyzing your document is a big and complex task, even for an AI. Please be patient, as it will take many minutes to complete. The counter will display sentences processed.

To see how the AI analyzes your text and populates the relevant categories, click on any domain, such as Customers, Needs, Functions, Solutions, or Processes.
